INTRODUCING THE **AQUA CLEANSE COLON IRRIGATION SYSTEM™** **PROFESSIONAL COLON HYDROTHERAPY**

AQUA CLEANSE FEATURES

- Internal Pre-warm Water Warming System
- Internal Sanitizing Cleaning System
- All Stainless Steel Flow Path Fittings**
- Stainless Steel Color-Coded Pressure Gauge
- 3-Stage "Plug N Play" Ultra Filtration System
- Stainless Steel Flow Control
- Stainless Steel Waste Hose Connection Coupler
- Water-Proof LED 50,000 Hour Lighting System
- Custom Clear Observation Tube
- Digital Timer
- 3 Year FULL Warranty

Leave inexpensive plastic fittings to your gardener and step into the medical field... with Aqua Cleanse Stainless Steel fittings!

Call today... let us introduce you to one of our pre-qualified training centers in schools across the country. CAUTION: Federal law restricts this device to sale by or on the order of a physician or licensed healthcare practitioner.

AQUA CLEANSE PLUG-N-PLAY FILTRATION SYSTEM

Our Ultrafiltration Water Filter System is capable of running at low water pressures, does not require a separate water holding tank, does not alter the pH of the water, and does not require electricity. This allows a continuous on demand supply of premium quality drinking water. Previously this process was used largely in municipal water treatment plants and hospitals; however, through technological advances it is now available as a home drinking water system! Simple and sanitary with quick twist filter changes; this system works great in low water pressure situations. Tested and certified by WQA to NSF/ANSI Standards 42 and 53 Filtering down to .2 microns!

SYSTEM INCLUDES THE FOLLOWING:

1 - Filter Unit

1 - Stage 1 Five micron sediment filter that reduces sand silt sediment and rust particles that may be in your water. **(REPLACE EVERY 3 MONTHS)**

1 - Stage 2 Heavy duty lead and Volatile Organic Compound (VOC) reducing carbon block filter (LVOC). **(REPLACE EVERY 3 MONTHS)**

1 - Stage 3 Hollow Fiber Technology using ultra filtration, a membrane filtration process which uses standard home water pressure to push water through its semi permeable membrane filtering down to .2 microns **(REPLACE EVERY 6 MONTHS)**

Three-Stage Filtration Removes Contaminants

Once the system is connected, water passes through a five-micron sediment filter, followed by a heavy-duty one-micron carbon block filter that reduces lead and chemicals. The third stage of filtration involves a state-of-the-art UF Hollow Fiber Technology membrane. Hollow Fiber Technology uses standard building water pressure to push water through a semi-permeable membrane. Suspended particles and materials of high molecular weight are unable to pass through the 0.2 micron UF membrane, leaving you with only fresh clean water and dissolved minerals.

Replacing Filter Cartridges

To remove cartridges simply twist each used cartridge in a clockwise direction – then simply twist the new cartridge into the housing bracket in a counter-clockwise direction.

QUALITY PRODUCTS AT A REASONABLE PRICE WITH FAST, FRIENDLY SERVICE!
