

Single Rail Regulated Power Supply

Introduction

The unit is designed for use with electronic modules, transistors, amplifiers etc, where the current required does not exceed 600mA. The low voltage output is protected against overload or short circuit by an electronic regulator.

Outputs

Smoothed and regulated voltages of 5, 9, 12 and 15V d.c. are available, selected by a four position rotary switch. Maximum current is 600mA.

The output is taken from two 4mm sockets colour coded red (positive) and black (negative).
