

Turfing a New Lawn

Stripy Green is a specially designed fertiliser to promote root establishment making it ideal to put under your turf. Feeding the lawn will help prevent moss and disease from establishing.

Apply at 35g/m² under the turf.

Seeding a New Lawn

We recommend **Stripy Green** fertiliser for a new seed as it promotes quick root establishment and fast growth. It can then be used every three months to keep the lawn healthy and green.

Spread with the seed at 35g/m²

Planting

Tree Bags can be used when planting shrubs, bedding plants or trees. They contain moisture retaining granules to hold moisture in the root zone, and micronutrients for all round growth.

Use 1 for bedding plants, 2 for larger shrubs and 4 or 5 for each tree.

Red Thread Disease

Apply a high nitrogen content fertiliser such as **Hi N Fertiliser** which will release the nutrients straight away.

Apply at 35g/m² when rain is due. Use in combination with lawn disease control to combat this common wet and warm weather disease.

Moss problem

The iron content in **Green n Blacks** fertiliser help to blacken the moss.

Apply at 70g/m² and then scarify out once you see it take effect.

Greening Up an Existing Lawn

Sherborne Turf fertiliser is high in nitrogen which will promote green growth. It is slow releasing so will be taken up by the grass over a period of three months

Apply at 35g/m²

Planting Beds / Hanging Baskets

Stripy Green contains a mixture of micronutrients which encourages leafy growth so your borders or planters will look at their best.

Apply at 35g/m²

Spring Lawn Feed

Stripy Green is an ideal choice for the spring feed as it contains a mixture of micronutrients which encourages leafy growth so your lawn will green up quickly.

Apply at 35g/m².

Summer Lawn Feed

Sherborne Turf is the best for a summer feed as it contains a high percentage of nitrogen which releases slowly so it is available for the plant for longer.

Apply at 20g/m² in cool, moist conditions if you can, or water in.

Autumn Lawn Feed

Green and Blacks will help to harden the lawns going into the cooler weather.

Apply at 35g/m²

Winter Lawn Feed

If the weather is mild it may be beneficial to feed your lawn with **Stripy Green**. It's micronutrients will promote root growth to strengthen the lawn under the soil and protect the grass from the coming harsher winter conditions.

Apply before the first frost at 35g/m²
