

Hook Block Scale ATP-100

airpes®

Infrared
telecommander

Battery

Charger

General information

The ATP hook block scale is an electronic weighing system of great precision, thought to be adapted to any type of crane. The advantages offered by this new system are that it allows to read the elevated load at the very moment without having to move it to a steady weighing machine, with the particularity that it does not lose height in the itinerary of elevation.

The ATP system is adaptable to load capacities from 2,000 Kg to 250,000Kg.

Characteristics

- Extractible visor
- Height of digits, 26/45/60mm (LCD or LED)
- Feeding through interchangeable batteries(2 batteries + charger)
- Functions, On, Off, pulsators in the visor
- Functions, Tare, Sum, Erase and Off, through Telecommander
- Accuracy: + / - 0.03%
- Admitted momentaneous overload 150%
- Protection IP,54
- Temperature -10°C - 50°C
- Humidity 15% - 85%

Optional:

- Communication by radio to Maxi-display
- Communication by radio to Mini-display
- Communication by radio to printer
- Protection IP-65 (exterior)
- Protection high temperatures (for works in foundries)
- Preselection of loads (doser)
