

AtmoSonic ULV Series 300 Fogger

Portable with Wide Range of Applications

The AtmoSonic 300 Series Ultra Low Volume Fogger (ULV) can be used for disinfection of hospitals, care homes, laboratories, pharmaceutical industries, clean rooms, healthcare, biotech & tissue culture labs, dairies, food processing, vehicle hire, and much more.

Compact With 6.5l & 8l Capacity

This compact machine works by producing small droplets of disinfecting agents at a controlled pressure and uniformity to ensure excellent performance. The smart control panel includes a digital screen for easy operation. The storage tank ranges from 6.5l to 8l, sufficient to cover an area of up to 20,000 cubic feet, eliminating the need for frequent refilling.

Suitable for Any Environment

As a ULV fogger, the Series 300 has both reduced noise and a long service life. This makes it suitable, dependent on the chemical used, for a huge variety of environments from medical to hospitality.

Use Any Chemical

The Series 300 fogger can be used for a wide variety of biocides. Your chosen fluid can be applied in concentrations of between 2-90% and at flow rates of 1-3 litres per hour using the fogger's upgraded Flow Control Mechanism.

Digital Timer

The fogger's digital timer allows adjustable run times for 1-99 minutes. The high-speed FHP motor, coupled with the advance thrust design of Air-jet nozzle, provides maximum thrust with a spraying distance of up to 50 feet.

Low Maintenance

The Entire body and internal parts of the Series 300 are made of sturdy, corrosion resistant materials, making the fogger both reliable and low maintenance.

Unique AtmoSonic OT 360° Turntable – Leave & let it do its work!

Use the all new 360° Oscillating Turntable for almost 3x the coverage. Vastly improving the performance of the 300 Series, the turntable allows your chosen biocide to cover an even amount of your entire space.

AtmoSonic ULV Foggers are part of the Atmosan Decontamination System.

Complete with Atmosan Organic Biocide & AtmoSure Testing System to maximise and demonstrate your results.
