

BD-SW-4B-44**Rain – RES - SEL – Pit , 4 button handlebar race****Yamaha R7 from 2022****Suitable for a re-flashed ECU with PIT speed function**

Designed for use on race bikes which need greater crash protection, do not need the lights, turn and horn controls, or simply need to save space on the handlebar.

The clutch wiring is included in this kit as a separate cable.

PIT - This switch also has one momentary (push and hold) switch for a pit limiter on bikes which have been re-flashed for this function. Two black wires need to be connected to a suitable input of the ECU

RAIN – This switch has one latching (Push to ON, push again to OFF) switch with two yellow wires for use with any rain light circuit on the bike.

No modification of the bike wiring is necessary for the RES and SEL functions as this kit plugs directly into the connectors of the standard wiring loom for the Up/Select/Down functions

Rugged machined aluminium enclosure and fully sealed IP67 switches.

**Compatible right side switch**

BD-SW-2B_45
Stop/Run , Start

**Function:**

Yellow	RAIN	Latching
Green	RES	Momentary
Green	SEL	Momentary
Black	Pit	Momentary

Note that a latching PIT switch is available on special request.

Electrical / Mechanical Characteristics

Wire..... Type 55 / 22
Max switch current..... 3 Amp
Switch sealing..... IP67
Housing.....Aluminium

Coating.....Black anodise
Dia (handlebar)22mm (7/8")
Min width at centre 13.5 mm
Weight 95 g
