KT192 Honda CBR1000RR (-R) Electronic Shock delete / bypass kit
CBR1000RR 2017-19
CBR1000RR-R 2020 onward, including the 2024 update

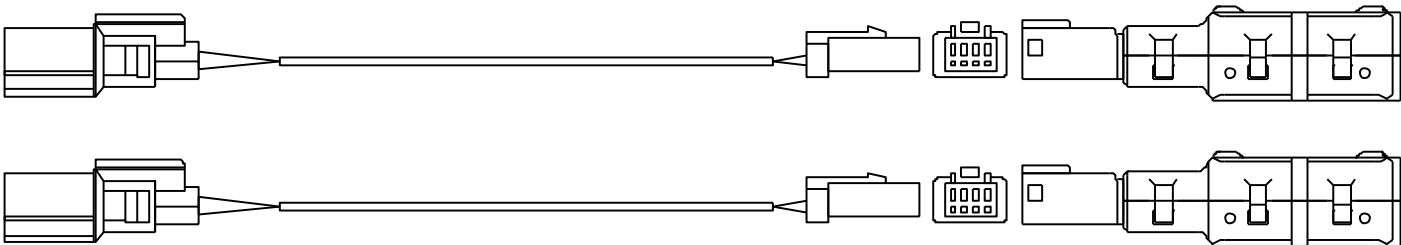

Plug in modules to replace the standard step-motors electronic shock of the Honda without a dash diagnostic warning light

Both modules are the same and can be fitted to bump or rebound valves

Connectors are located behind the upper right side fairing panel. This needs to be removed to gain access.

Modules need no special mounting, just cable tie to the existing loom and avoid contact with the engine to avoid heat soak.

IMPORTANT : Turn off the ignition and wait 10 seconds before disconnecting anything. If a diagnostic is shown, switch off and wait the 10 seconds, the diagnostic is removed from the dash.

Kit includes

- 2 x Type A-B bypass modules
- 2 x Extension cables to suit the Honda connectors

Electrical / Mechanical Characteristics

Wire..... Type 55 / 22
Switch sealing..... IP67
Housing..... PLA
Coating..... Black
