

Thank you for purchasing an Antiference ASM01 signal meter

**PLEASE READ THE FOLLOWING INFORMATION CAREFULLY**

**Antiference ASM01 battery charging procedure**

**Red LED** – charging, **Green LED** – fully charged, **Orange LED** – battery or battery circuit problem

Normal charge time is 4 to 6 hours. Once the led turns green, **REMOVE THE CHARGER IMMEDIATELY**. Over charging could damage the unit and may invalidate the warranty.

If the message “Low power, ready to shut down, please connect the charger” is displayed, **connect the charger immediately.**

**Do not attempt to power the ASM01 until the unit has enough charge as this may damage the Lithium ion circuit.**

**Never leave the ASM01 on charge overnight. Never charge it when hot and don't let the ASM01 run dead flat.**

**Always ensure the charger is removed once the led turns green.**

**Do not store the ASM01 with the F connectors attached to the meter, damaged input connections are not covered by the 1 year warranty!**
