Garden Fireplace Installation – Product Guide

Hints & Tips: Which product to use where
Customers often ask which bag or tub is needed for each stage of the build.

1. SKORSTENSLIM – Lip Glue / Jointing Compound

Available in: 5 kg bag & 20 kg bag (yellow vertical band)

What it is: Special adhesive / jointing compound for Isokern chimneys, flues and fireplaces.

Where to use it:

- Stick the side fire bricks to the pumice fire chamber
- Seal the joints of the pumice parts (blocks / modules)

Tip: This is the “glue” that holds the main structure together. Do not confuse it with the render or the firebrick grout.

2. ISOKERN PEJSEMØRTEL – Firebrick Grout

Available in: 5 kg tub & 10 kg tub

What it is: High-temperature product specially made for filling the gaps between fire bricks.

Where to use it:

- Grouting the firebrick joints inside the fire chamber

Tip: Only use this for the joints between the fire-facing bricks. It is designed to withstand high temperatures. Follow the mixing and curing instructions on the tub carefully.

3. SKORSTENSPUDS – Render / Plaster

Available in: 20 kg bag (grey / dark vertical band)

What it is: Special render / plaster for Schiedel Isokern chimney systems. Designed to save a work stage when finishing the exterior.

Where to use it:

- Rendering / plastering the outside of the chimney or fire chamber structure

Tip: This is the external finish. It is not used inside the fire chamber or for sticking the pumice blocks together.

QUICK REFERENCE

Product	Packaging	Main Use
Skorstenslim (Lip Glue)	5 kg or 20 kg bag (yellow band)	Stick fire bricks to pumice + seal pumice joints
Pejsemørtel (Firebrick Grout)	5 kg or 10 kg tub	Grouting the firebrick joints
